## Objective and Investment Policy

The Fund is an index-tracking UCITS passively managed. The Investment objective of the Fund is to track both the upward and the downward evolution of the MSCI EMU Net Return index (net dividends reinvested) (the Benchmark Index<sup>1</sup>) denominated in EUR and representative of large-cap and mid-cap companies listed on developed markets in the euro zone, while minimizing the volatility of the difference between the return of the Sub-Fund and the return of the Benchmark Index (the "Tracking Error"). The anticipated level of tracking error in normal market conditions is indicated in the prospectus. Additional information about the Benchmark Index can be found at [www.msci.com](http://www.msci.com). The Fund seeks to achieve its objective via a direct replication, by investing primarily in the securities comprising the Benchmark Index. To optimize the Benchmark Index replication, the Fund may use a sampling replication strategy. The potential use of this technique is published on Amundi's website: [www.amundi-etf.com](http://www.amundi-etf.com). Updated composition of the Fund holdings is available on [www.amundi-etf.com](http://www.amundi-etf.com). MSCI's website ([www.msci.com](http://www.msci.com)) contains more detailed information about the MSCI indexes. In addition, the indicative net asset value is published on the Reuters and Bloomberg pages of the Fund, and might also be mentioned on the websites of the stock exchanges where the Fund is listed. The Fund is eligible to the French Equity Saving Scheme (PEA), and as consequence, a minimum of 75% of the Fund assets are invested in diversified equities issued in the European Union.

\* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances.
