Regulation for art. 8 sub-funds**

SUMMARY

Product Name:

Amundi MSCI Water UCITS ETF

Legal entity identifier:

9695004Y3YNBCRB45L58

No sustainable investment objective

This financial product promotes environmental or social characteristics, but does not have as its objective sustainable investment

This financial product commits to making sustainable investments.

Environmental or social characteristics of the financial product

The financial product promotes environmental and/or social characteristics through the replication of a reference benchmark incorporating an environmental, social and governance ("ESG") rating.

The reference benchmark is constructed using a Best-in-Class approach, i.e., companies with the highest ESG ratings in each sector (according to the Global Industry Classification Standard [GICS]) are selected in order to construct the Reference Benchmark.

The Best-in-Class approach aims to favour the best performing companies within a universe, sector or class. With this Best-in-Class filter, the Sub-Fund adopts a non-financial approach based on a commitment making it possible to reduce the Investment Universe (as the number of issuers) by at least 20%.

Proportion of investments

At least 90% of the UCI's securities and instruments are subject to an ESG analysis and are therefore aligned with the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy. In addition, the UCI undertakes to hold a minimum of 10% in sustainable investments, as shown in the table below.

Monitoring, methodologies, data sources and their limitations, due diligence and engagement policies

All ESG data, either externally or internally processed, is centralised by the Responsible Investment Business line, which is responsible for controlling the quality of the inputs and processed ESG outputs. This monitoring includes an automated quality check as well as a qualitative check from ESG analysts who are specialists of their sectors. ESG scores are updated on a monthly basis within Amundi's proprietary tool Stock Rating Integrator (SRI) module.

Sustainability indicators used within Amundi rely on proprietary methodologies. These indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

Moreover these indicators are embedded within Amundi's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

Amundi's ESG scores are built using Amundi's ESG analysis framework and scoring methodology. We source data from the following sources for ESG scores: Moody, ISS-Oekom, MSCI, and Sustainalytics.

Our methodology limitations are by construction linked to use of ESG data. The ESG data landscape is currently being standardised which can impact data quality; data coverage also is a limitation. Current and future regulation will improve standardized reporting and corporate disclosures on which ESG data rely.

We are aware of these limitations which we mitigate by a combination of approaches.

Each month, the ESG score are recalculated according Amundi quantitative methodology. The result of this calculation is then reviewed by the ESG analysts who perform a qualitative "sampling control" on its sector based on various checks.

Amundi engages investee or potential investee companies at the issuer level regardless of the type of holdings held (equity and bonds).
